

Safety Data Sheets (SDS)

revision: **February 2026**

Solvay ensures that its product portfolio complies with the relevant regional and national chemical regulations such as REACH (Registration, Evaluation, Authorization and Restriction of Chemical Substances) in the European Union, UK REACH in the United Kingdom, K-REACH in South Korea, Chinese MEE order N°12 in China, KKDIK in Turkey and TSCA in the US.

Solvay has a strict approach regarding restricted substances. These are not manufactured nor used as soon as a market ban/restriction is imposed by the competent authorities.

SAFETY DATA SHEETS

Solvay currently places over 1,000 products on the market and produces safety data sheets (SDS) in 39 languages, as well as specific SDS for 63 countries. Product Stewardship programs give adequate information and technical assistance to customers, ensuring a good understanding of products and how to safely use and handle them. Each of our Global Business Units is responsible for ensuring that SDS are revised at least once every three years, or every time a substance undergoes significant modifications (from a regulatory standpoint for instance). Solvay manages product information centrally and as legislation continues to evolve the Group learns more about the conditions under which products are used, so as to record and assess any associated risks.

To make sure that customers are receiving new and updated Safety Data Sheets, and to limit the quantity of paper printed, Solvay uses an automatic system to send SDS by email. In 2025, this automated shipping function was activated for 99.98 % of Solvay sales. This automatic delivery of the SDS was successful for 99.3 % of shipments, where Safety Data Sheets were available for the delivery country and the customer's email address was also available. When errors occur, corrections are made and the SDS are automatically or manually sent.
